About Us

The Brain Injury program at Queens Nassau Rehabilitation and Nursing Center provides intensive inpatient rehabilitation services for brain injured individuals with the goal of restoring function to the highest possible level of independence. We address a variety of brain injury related impairments stemming from strokes, aneurysms, anoxia and open head injuries. Two distinct programs have been designed to meet the specialized needs of the TBI population. We provide for the physical, cognitive, behavioral, emotional, social and interpersonal needs of our residents. This therapeutic environment fosters a level of independence consistent with each individuals potential.
